Janome says, “Windows 8 users need to install a Windows 8 compatible dongle driver before installation of Janome Digitizer V4 software”.. Since the new Windows 8 driver specifically works with Windows 8, and you are having problems with this O/S, there's probably just something simple that needs to be done, unless your computer itself has problems, and then you would have to clear those up first.. Unfortunately, there are too many factors involved, and too many possibilities in regards to things that may be wrong.. Janome has always been the best at keeping their embroidery software usable and up to date with new versions of the Windows operating system.. I've been working with computers long enough to remember the days when things didn't just actually work instantly, and it seems you may have a similar issue.
